PROFILE

Student of Software Analysis and Development Technology, with a focus on web application development. I have experience in designing and implementing systems using Java with Spring Boot, relational databases such as MySQL, and web technologies including JavaScript, HTML, CSS, and Bootstrap.

I stand out for my problem-solving skills, logical analysis, and application of good development practices. I am committed to continuous learning and enhancing my technical skills, with the aim of contributing value to software development projects.

WORK EXPERIENCE

Technology Assistant | Automation Development

January 2026 - July 2026

Universidad Externado de Colombia

- Designed and implemented process automation workflows using n8n.
 - Integrated systems and services through APIs, webhooks, and connectors.
 - Optimized operational processes through automated workflows.
 - Monitored, validated, and continuously improved implemented automations.
 - Created technical and functional documentation for developed workflows.
 - Analyzed requirements to identify automation opportunities within institutional processes.
-

EDUCATION

Software Analysis and Development Technology

April 2024 - July 2026

Servicio Nacional de Aprendizaje (SENA)

Technical Program in Administrative Assistance

2022 - 2023

Servicio Nacional de Aprendizaje (SENA)

Technical Academic High School Diploma

2023

Institución educativa Chiloe

SKILLS

- | | | |
|----------|--|-------------------------|
| • C# | • CSS | • .Net |
| • Python | • Relational databases (MySQL)- Non-relational databases (MongoDB) | • Entity Framework & EF |
| • Java | • JavaScript | • Vue.js |
| • HTML | | • Docker |
-

LANGUAGES

- Spanish: Native language
- English: Advanced

Personal projects

Indrugs – Software for Medication Management and Home Delivery

Indrugs is a software application developed as a personal project, focused on medication management and home delivery distribution.

It includes role-based access control, secure authentication, user management, order management, delivery service management, as well as administrative and user support modules.

The project was designed following good software development practices, with a layered architecture using MVC, focused on scalability and maintainability.

Technology Stack

- Backend developed in Java using Spring Boot, with a layered architecture including controllers, services, and repositories.
- MySQL as the relational database.
- Frontend built with HTML5, CSS3, and Bootstrap, using JavaScript for user interaction.
- REST API integration for communication between the frontend and backend.
